

PCI-AIRE Unit \$299.95

PCI-AIRE Lamp Module \$79.95

Our innovative air purifier uses advanced technology that goes beyond mechanical filtration methods such as high-efficiency particulate air (HEPA) and other methods such as electrostatic filtration, ozone, ultraviolet light and ionizers. The PCI-AIRE uses same natural process created by the sun and thunderstorms. Our photocatalysis technology oxidizes odors, fungi, mold and other parasites, and toxic chemical gases. At the same time it settles dust and other large particles out of the air and destroys micro-organisms like bacteria and viruses.

Consistent reduction of airborne bacteria and mold was produced by all of our Air Purifier devices tested in this in-home study. This was typically about 80% reduction of molds and about 50% to 75% reduction of bacteria comparing the six-day treatment with the untreated in-home base line values. Normal home activities were maintained throughout the test period.

Points to Note

- Low, 15 watt Power consumption
- 2 year lamp life
- Easily Portable, just plug and go!
